SUMMARY

Full-stack developer with 6 years in production software, the last 2+ on AI/LLM systems. Built agentic AI workflows (LangChain/LangGraph + Gemini), a Text-to-SQL engine, and an LLM observability platform from scratch. Ships production TypeScript/React front-ends and Python back-ends on PostgreSQL and GCP. Leads 5 engineers; works fully remote.

EXPERIENCE

Senior Full Stack Developer

Nov 2022 – Present

AsInt

Ahmedabad, India

- Designed an **agentic AI workflow** using **LangChain/LangGraph + Gemini** with **human-in-the-loop** controls, automating inspection creation and reducing research effort by **30%** while maintaining review.
- Built a **real-time notification service** using **PostgreSQL WAL-based CDC**, where a **Mistral LLM** classifies and prioritizes events, delivering alerts to **1,000+ users** within **20s** via **WebSockets** to a **React** UI.
- Built a **token-metering** and **LLM observability platform** from scratch, replacing **Langfuse** – five-tier request pricing, **request-level tracing**, and **audit trails**; **prompt caching** cut LLM token costs **~90%**.
- Built a **Text-to-SQL engine** from scratch using schema-grounded **RAG** and **guardrails** against **destructive SQL** and **cross-tenant leakage**, achieving **75%** accuracy across **200+ schemas**.
- Re-architected** a legacy monolith into a **multi-tenant SaaS platform** (**Node.js**, **MongoDB**) with **Java/React SSO** (**Enterprise IDP + OTP**), isolating **10 tenants**; **+20%** throughput, **40%** faster login.
- Owned **architecture** and end-to-end delivery for the team's AI systems; drove **build-vs-buy** decisions through RFCs across design, implementation, and production deployment.
- Architected a **multimodal document extraction pipeline** using **Gemini vision LLM**, achieving **90% field-level accuracy** across document workflows, with page images served via **GCS URLs** to a **React** UI.

Associate Software Developer

Sep 2020 – Sep 2022

Incture Technologies

Bengaluru, India

- Shipped a **MERN real-time messaging platform** (**WebSockets**, **JWT**, **MongoDB**) for **1,000+ users**, and a reusable **Jest-tested React** rich-text editor (**TinyMCE**) adopted across **7 products**.

PROJECTS

- CryptoLens** – RAG research agent over a crypto analyst's **YouTube** archive; scraped **2,000+ transcripts**, applied **chunking** and **BGE-M3** embeddings, and indexed in **Qdrant**. Built **hybrid search** with **temporal reranking**, cross-time **contradiction detection**, and **citation-grounded answers** with video + timestamp references using **Groq (Llama 3.3 70B) + Gemini**, with **Streamlit + Telegram**.

EDUCATION

Bachelor of Engineering, Siddaganga Institute of Technology

2016-2020

Computer Science and Engineering - 8.5/10

SKILLS

AI & Machine Learning	Agentic Workflows (LangChain, LangGraph, Tool/Function Calling), RAG, Text-to-SQL, Prompt Engineering, LLM APIs (Gemini, Mistral, Groq/Llama), LLM Observability, Token Metering & Cost Optimization, Embeddings (BGE-M3), Vector DBs (Qdrant), Hybrid & Semantic Search, Multimodal/Vision-LLM Extraction
Back-End	Python, TypeScript, Node.js, FastAPI, REST APIs, WebSockets, Event-Driven Architecture (CDC), Java
Front-End	React.js, TypeScript, Redux, Material UI, Tailwind CSS
Data & Cloud	PostgreSQL, MongoDB, MySQL, Firebase/Firestore, GCP, Google Cloud Run, Docker, Git, CI/CD
Security & Practices	AI Guardrails, Testing (pytest, Jest, JUnit, Mockito), Multi-Tenant Isolation, System Design, OAuth2/OIDC, SSO (Enterprise IDP), JWT, Distributed Systems, Agile
