SUMMARY

Senior Python engineer with 6 years in production software, the last 2+ on AI/LLM systems. Built a token-metering and LLM observability platform from scratch (prompt caching cut costs ~90%), a Text-to-SQL engine with schema-grounded RAG, and an event-driven notification service on PostgreSQL CDC. Re-architected a legacy monolith into a multi-tenant SaaS platform. Leads 5 engineers across Python, FastAPI, and system design.

EXPERIENCE

Senior Full Stack Developer

Nov 2022 – Present

AsInt

Ahmedabad, India

- Built a **token-metering and LLM observability platform from scratch**, replacing **Langfuse** – five-tier request pricing, **request-level tracing**, and **audit trails**; **prompt caching** cut LLM token costs ~90%.
- Built a **Text-to-SQL engine from scratch** using schema-grounded **RAG** and **guardrails** against **destructive SQL** and **cross-tenant leakage**, achieving **75%** accuracy across **200+** schemas.
- Built a **real-time notification service** using **PostgreSQL WAL-based CDC**, where a **Mistral LLM** classifies and prioritizes events, delivering alerts to **1,000+** users within **20s** via **WebSockets** to a **React** UI.
- **Re-architected** a legacy monolith into a **multi-tenant SaaS platform** (**Node.js**, **MongoDB**) with **Java/React** **SSO** (**Enterprise IDP** + **OTP**), isolating **10 tenants**; +20% throughput, 40% faster login.
- **Lead engineer** for the team's AI systems, owning **architecture** and end-to-end delivery; drove **build-vs-buy** decisions through RFCs and mentored **5 engineers** across design, implementation, and production deployment.
- Designed an **agentic AI workflow** using **LangChain/LangGraph** + **Gemini** with **human-in-the-loop** controls, automating inspection creation and reducing research effort by **30%** while maintaining review.
- Architected a **multimodal document extraction pipeline** using **Gemini vision LLM**, achieving **90%** field-level accuracy across document workflows, with page images served via **GCS URLs** to a **React** UI.

Associate Software Developer

Sep 2020 – Sep 2022

Incture Technologies

Bengaluru, India

- Shipped a **MERN real-time messaging platform** (**WebSockets**, **JWT**, **MongoDB**) for **1,000+** users, and a reusable **Jest**-tested **React** rich-text editor (**TinyMCE**) adopted across **7 products**.

PROJECTS

- **CryptoLens** – RAG research agent over a crypto analyst's **YouTube** archive; scraped **2,000+** transcripts, applied **chunking** and **BGE-M3** embeddings, and indexed in **Qdrant**. Built **hybrid search** with **temporal reranking**, cross-time **contradiction detection**, and **citation-grounded answers** with video + timestamp references using **Groq (Llama 3.3 70B)** + **Gemini**, with **Streamlit** + **Telegram**.

EDUCATION

Bachelor of Engineering, Siddaganga Institute of Technology

2016-2020

Computer Science and Engineering - 8.5/10

SKILLS

AI & Machine Learning	RAG, Agentic Workflows (LangChain, LangGraph, Tool/Function Calling), Text-to-SQL, LLM Observability, Token Metering & Cost Optimization, Prompt Engineering, LLM APIs (Gemini, Mistral, Groq/Llama), Embeddings (BGE-M3), Vector DBs (Qdrant), Hybrid & Semantic Search, Multimodal/Vision-LLM Extraction
Back-End	Python, FastAPI, Event-Driven Architecture (CDC), REST APIs, WebSockets, Java, Node.js, TypeScript
Front-End	React.js, TypeScript, Redux, Material UI, Tailwind CSS
Data & Cloud	PostgreSQL, MongoDB, CI/CD, Docker, GCP, Google Cloud Run, Git, MySQL, Fire-base/Firestore
Security & Practices	System Design, Multi-Tenant Isolation, AI Guardrails, Distributed Systems, OAuth2/OIDC, SSO (Enterprise IDP), JWT, Testing (pytest, Jest, JUnit, Mockito), Agile
