SUMMARY

AI engineer who builds AI infrastructure, not just AI features. Built a token-metering and LLM observability platform from scratch; prompt caching cut LLM token costs ~90%. 6 years in production software, the last 2+ on AI/LLM systems: RAG, agentic workflows (LangChain, LangGraph), multimodal document intelligence (YOLOv11 + Vision LLMs), Text-to-SQL, and event-driven architecture – serving 1,000+ users across 10 enterprise tenants on GCP. Leads 5 engineers across Python, FastAPI, Java, Node.js, and React.

EXPERIENCE

Senior Full Stack Developer

Nov 2022 – Present

AsInt

Ahmedabad, India

- **Lead engineer** for the team's AI systems, owning **architecture** and end-to-end delivery; drove **build-vs-buy** decisions through RFCs and mentored **5 engineers** across design, implementation, and production deployment.
- **Re-architected** a legacy monolith into a **multi-tenant SaaS platform** (**Node.js**, **MongoDB**) with **Java/React SSO** (**Enterprise IDP + OTP**), isolating **10 tenants**; **+20%** throughput, **40%** faster login.
- Built a **real-time notification service** using **PostgreSQL WAL-based CDC**, where a **Mistral LLM** classifies and prioritizes events, delivering alerts to **1,000+ users** within **20s** via **WebSockets** to a **React UI**.
- Built a **token-metering and LLM observability platform from scratch**, replacing **Langfuse** – five-tier request pricing, **request-level tracing**, and **audit trails**; **prompt caching** cut LLM token costs ~**90%**.
- Built a **Text-to-SQL engine from scratch** using schema-grounded **RAG** and **guardrails** against **destructive SQL** and **cross-tenant leakage**, achieving **75%** accuracy across **200+ schemas**.
- Designed an **agentic AI workflow** using **LangChain/LangGraph + Gemini** with **human-in-the-loop** controls, automating inspection creation and reducing research effort by **30%** while maintaining review.
- **Trained and deployed a custom YOLOv11** document-layout model using **PyTorch** on **Google Cloud Run**, achieving **80% mAP@0.5** across **2,500+ annotated document images**.
- Architected a **multimodal document extraction pipeline** using **Gemini vision LLM**, achieving **90% field-level accuracy** across document workflows, with page images served via **GCS URLs** to a **React UI**.

Associate Software Developer

Sep 2020 – Sep 2022

Incture Technologies

Bengaluru, India

- Shipped a **MERN real-time messaging platform** (**WebSockets**, **JWT**, **MongoDB**) for **1,000+ users**, and a reusable **Jest-tested React** rich-text editor (**TinyMCE**) adopted across **7 products**.

PROJECTS

- **CryptoLens** – RAG research agent over a crypto analyst's **YouTube** archive; scraped **2,000+ transcripts**, applied **chunking** and **BGE-M3** embeddings, and indexed in **Qdrant**. Built **hybrid search** with **temporal reranking**, cross-time **contradiction detection**, and **citation-grounded answers** with video + timestamp references using **Groq (Llama 3.3 70B) + Gemini**, with **Streamlit + Telegram**.

EDUCATION

Bachelor of Engineering, Siddaganga Institute of Technology

2016-2020

Computer Science and Engineering - 8.5/10

SKILLS

AI & Machine Learning	LLM APIs (Gemini, Mistral, Groq/Llama), RAG, Agentic Workflows (LangChain, LangGraph, Tool/Function Calling), Prompt Engineering, Multimodal/Vision-LLM Extraction, Computer Vision (YOLOv11, PyTorch), Text-to-SQL, Embeddings (BGE-M3), Vector DBs (Qdrant), Hybrid & Semantic Search, LLM Observability, Token Metering & Cost Optimization
Back-End	Python, FastAPI, Java, Node.js, TypeScript, AngularJs, REST APIs, WebSockets, Event-Driven Architecture (CDC)
Front-End	React.js, TypeScript, Redux, Material UI, Tailwind CSS
Data & Cloud	Docker, CI/CD, GCP, Google Cloud Run, Git, PostgreSQL, MongoDB, MySQL, Firebase/Firestore
Security & Practices	Distributed Systems, System Design, Multi-Tenant Isolation, Security (OAuth2/OIDC, SSO, JWT), AI Guardrails, Testing (pytest, Jest, JUnit, Mockito), Agile
