SUMMARY

Senior engineer who owns architecture from design through production deployment across distributed, cloud-native systems. 6 years in production software, 2+ on AI/LLM infrastructure: RAG, agentic workflows, Text-to-SQL with guardrails, and LLM observability. Re-architected a multi-tenant SaaS platform serving 10 enterprise tenants; built event-driven services delivering alerts to 1,000+ users in real time. Leads 5 engineers; experienced with CI/CD, containers, and automated testing.

EXPERIENCE

Senior Full Stack Developer

Nov 2022 – Present

AsInt

Ahmedabad, India

- **Lead engineer** for the team's AI systems, owning **architecture** and end-to-end delivery; drove **build-vs-buy** decisions through RFCs and mentored **5 engineers** across design, implementation, and production deployment.
- **Re-architected** a legacy monolith into a **multi-tenant SaaS platform** (**Node.js**, **MongoDB**) with **Java/React SSO** (**Enterprise IDP + OTP**), isolating **10 tenants**; **+20%** throughput, **40%** faster login.
- Built a **real-time notification service** using **PostgreSQL WAL-based CDC**, where a **Mistral LLM** classifies and prioritizes events, delivering alerts to **1,000+ users** within **20s** via **WebSockets** to a **React UI**.
- Built a **Text-to-SQL engine from scratch** using schema-grounded **RAG** and **guardrails** against **destructive SQL** and **cross-tenant leakage**, achieving **75%** accuracy across **200+ schemas**.
- Built a **token-metering and LLM observability platform from scratch**, replacing **Langfuse** – five-tier request pricing, **request-level tracing**, and **audit trails**; **prompt caching** cut LLM token costs **~90%**.
- Designed an **agentic AI workflow** using **LangChain/LangGraph + Gemini** with **human-in-the-loop** controls, automating inspection creation and reducing research effort by **30%** while maintaining review.
- Architected a **multimodal document extraction pipeline** using **Gemini vision LLM**, achieving **90% field-level accuracy** across document workflows, with page images served via **GCS URLs** to a **React UI**.

Associate Software Developer

Sep 2020 – Sep 2022

Incture Technologies

Bengaluru, India

- Shipped a **MERN real-time messaging platform** (**WebSockets**, **JWT**, **MongoDB**) for **1,000+ users**, and a reusable **Jest-tested React** rich-text editor (**TinyMCE**) adopted across **7 products**.

PROJECTS

- **CryptoLens** – RAG research agent over a crypto analyst's **YouTube** archive; scraped **2,000+ transcripts**, applied **chunking** and **BGE-M3** embeddings, and indexed in **Qdrant**. Built **hybrid search** with **temporal reranking**, cross-time **contradiction detection**, and **citation-grounded answers** with video + timestamp references using **Groq (Llama 3.3 70B) + Gemini**, with **Streamlit + Telegram**.

EDUCATION

Bachelor of Engineering, Siddaganga Institute of Technology

2016-2020

Computer Science and Engineering - 8.5/10

SKILLS

AI & Machine Learning	RAG, Agentic Workflows (LangChain, LangGraph, Tool/Function Calling), Text-to-SQL, LLM Observability, Token Metering & Cost Optimization, Prompt Engineering, LLM APIs (Gemini, Mistral, Groq/Llama), Embeddings (BGE-M3), Vector DBs (Qdrant), Hybrid & Semantic Search, Multimodal/Vision-LLM Extraction, Computer Vision (YOLOv11, PyTorch)
Back-End	REST APIs, Event-Driven Architecture (CDC), TypeScript, WebSockets, Python, FastAPI, Java, Node.js
Front-End	React.js, TypeScript, Redux, Material UI, Tailwind CSS
Data & Cloud	PostgreSQL, Docker, CI/CD, GCP, Google Cloud Run, MongoDB, MySQL, Firebase/Firestore, Git
Security & Practices	System Design, Distributed Systems, AI Guardrails, Testing (pytest, Jest, JUnit, Mockito), Multi-Tenant Isolation, OAuth2/OIDC, SSO (Enterprise IDP), JWT, Agile
