SUMMARY

Frontend-leaning full-stack engineer with 6 years in production software, the last 2+ on AI/LLM systems. Built React UIs across a multi-tenant SaaS, real-time notification service, and multimodal extraction pipeline. Shipped LLM-powered features including agentic workflows, Text-to-SQL, and a token-metering platform that cut costs ~90%. Leads 5 engineers; owns product surfaces end to end from React UI to backend APIs.

EXPERIENCE

Senior Full Stack Developer

Nov 2022 – Present

AsInt

Ahmedabad, India

- **Re-architected** a legacy monolith into a **multi-tenant SaaS platform (Node.js, MongoDB)** with **Java/React SSO (Enterprise IDP + OTP)**, isolating **10 tenants**; **+20%** throughput, **40%** faster login.
- Delivered alerts to **1,000+ users** within **20s** via **WebSockets** to a **React** UI, powered by **PostgreSQL WAL-based CDC** and a **Mistral LLM** that classifies and prioritizes events in real time.
- Built a **token-metering and LLM observability platform from scratch**, replacing **Langfuse** – five-tier request pricing, **request-level tracing**, and **audit trails**; **prompt caching** cut LLM token costs **~90%**.
- Designed an **agentic AI workflow** using **LangChain/LangGraph + Gemini** with **human-in-the-loop** controls, automating inspection creation and reducing research effort by **30%** while maintaining review.
- **Lead engineer** for the team's AI systems, owning **architecture** and end-to-end delivery; drove **build-vs-buy** decisions through RFCs and mentored **5 engineers** across design, implementation, and production deployment.
- Built a **React** UI for a **multimodal document extraction pipeline** using **Gemini vision LLM**, achieving **90% field-level accuracy** across document workflows, with page images served via **GCS URLs**.
- Built a **Text-to-SQL engine from scratch** using schema-grounded **RAG** and **guardrails** against **destructive SQL** and **cross-tenant leakage**, achieving **75%** accuracy across **200+ schemas**.
- **Trained and deployed a custom YOLOv11** document-layout model using **PyTorch** on **Google Cloud Run**, achieving **80% mAP@0.5** across **2,500+ annotated document images**.

Associate Software Developer

Sep 2020 – Sep 2022

Incture Technologies

Bengaluru, India

- Shipped a **MERN real-time messaging platform (WebSockets, JWT, MongoDB)** for **1,000+ users**, and a reusable **Jest-tested React** rich-text editor (**TinyMCE**) adopted across **7 products**.

PROJECTS

- **CryptoLens** – RAG research agent over a crypto analyst's **YouTube** archive; scraped **2,000+ transcripts**, applied **chunking** and **BGE-M3** embeddings, and indexed in **Qdrant**. Built **hybrid search** with **temporal reranking**, cross-time **contradiction detection**, and **citation-grounded answers** with video + timestamp references using **Groq (Llama 3.3 70B) + Gemini**, with **Streamlit + Telegram**.

EDUCATION

Bachelor of Engineering, Siddaganga Institute of Technology

2016-2020

Computer Science and Engineering - 8.5/10

SKILLS

AI & Machine Learning	LLM APIs (Gemini, Mistral, Groq/Llama), Prompt Engineering, Agentic Workflows (LangChain, LangGraph, Tool/Function Calling), RAG, Text-to-SQL, LLM Observability, Token Metering & Cost Optimization, Multimodal/Vision-LLM Extraction, Computer Vision (YOLOv11, PyTorch), Embeddings (BGE-M3), Vector DBs (Qdrant), Hybrid & Semantic Search
Back-End	Node.js, TypeScript, Python, FastAPI, Java, REST APIs, WebSockets, Event-Driven Architecture (CDC)
Front-End	React.js, TypeScript, Tailwind CSS, Redux, Material UI
Data & Cloud	PostgreSQL, MongoDB, MySQL, Firebase/Firestore, GCP, Google Cloud Run, Docker, Git, CI/CD
Security & Practices	OAuth2/OIDC, SSO (Enterprise IDP), JWT, Multi-Tenant Isolation, AI Guardrails, Distributed Systems, System Design, Testing (pytest, Jest, JUnit, Mockito), Agile
